Manoj,

The original permit (attached) and subsequent permits issued to the facility has only conditions for only one type of cured coating (extreme performance). Only the permit 14-RSG-142 has permit conditions for other type of cured coatings. This gives an impression that it may have been previously determined only extreme performance coatings are applied at the facility. The attached Preliminary determination has description of each process and describes the coatings are extreme performance and states that these types of coatings are required by the Federal Food and Drug Administration and chemical manufacturers for corrosion protection (see the process descriptions after the modeling analysis section of the preliminary determination).
